

# Fetal Alcohol Spectrum Disorder

## Evidence-Based Diagnosis – 2019 course schedule

### Overview

The Fetal Alcohol Spectrum Disorder (FASD) Diagnostic Clinic sits within the Gold Coast Child Development Service.

Since 2014, the clinic has been diagnosing children from all over Australia; offering regular training courses for clinicians; community-based education; and is actively involved in FASD research.

The course centers around multidisciplinary evidence-based diagnosis of FASD. The Australian Guide to the Diagnosis of FASD and other coding systems are discussed in the context of diagnosing the disorder.

The course is suitable for paediatricians, psychologists, speech pathologists, psychiatrists and other medical and allied health professionals involved in the diagnosis of FASD in children.

FASD diagnosis requires a comprehensive multidisciplinary assessment approach to achieve the diagnosis. The team can be formal (child development or mental health service) or virtual (cross referrals).

Course delivery is multimodal, using lectures, case studies, video examples, and vignettes where small groups review assessment results and work toward diagnostic conclusions.

2019 course dates	Status
29 – 31 May 2019	Places available
30 October – 1 November 2019	Places available

### Prerequisites

1. Completion of [Telethon Kids Institute training modules](#)
